Synopsis

Ettore Majorana.

The greatest scientist of all times.

After his mysterious disappearance on 25 March 1938, the world slowly began to forget him.

Then, in 2016, a dramatic turn of events.

That “coincidence”, which we do not believe in, had us meet Rolando Pelizza, a determined man with a mathematical mind of incredible applicative capacity.

This marked the reopening of the “Majorana case” for us.

From the meetings with Rolando we obtained such information as to reward all our curiosity and desire for knowledge.

But there is much more ...

Survival of the human race on Earth is at stake.

We believe it is our task to spread in its the information we have received.

With this in mind we wrote the book that you are about to read.

The Machine. The bridge between science and the Beyond

The history of humanity is studded with mysteries, facts or natural phenomena for which no-one has ever been able to give an explanation.

The disappearance of Ettore Majorana was one of these.

For those who have lived in Italy or who have studied history or science, and who have *fortuitously* stumbled over a book or an article on the topic, the case will be well-known.

For all the others it is about to become so.

Ettore Majorana was a brilliant theoretical physicist, an incomparable mind of his era: Enrico Fermi, Italian physicist, Nobel Prize winner for physics in 1938 said of him: “he had gifts that he alone in the world possessed.”

A tenure in the faculty of theoretical physics was instituted *ad hoc* at the University of Naples and assigned to him without competition “for high fame and unique expertise”. The same method used to assign a chair to Guglielmo Marconi.

Then the “tragedy”.

On 25 March 1938 Ettore boarded a ferry from Naples to Palermo and from there all trace of him was lost. The searches that his family and the authorities conducted in every corner of the nation were all in vain.

We will relate what happened after that in a succession of events that lead right up to the present day.

First and foremost the motivation.

It was on the eve of World War II. In that situation disappearing had become an absolute necessity for Ettore. He had discovered something that would have endangered not only his own life but also that of the whole human race.

The torment of a brilliant scientist who had seen too many things in advance, compelled him to that far-sighted decision.

Knowledge is neither good nor bad, as you know, it depends what use it is put to. Atomic physics, for example, besides useful results, also produced the atom bomb.

Ettore had gone well beyond the limits of the then known, right up to comprehension of the foundations of the Universe, which he translated into a completely new mathematics and physics, that is “of the Third Millennium”. With these tools he was able to construct a theoretical outline of the ways in which Matter operated, which were so precise and reliable that they could be transformed into a “machine”.

Just as an electron disappears from one orbit to reappear in another, so Ettore reappeared twenty years after his disappearance, on 1 May 1958, in an Italian monastery. Destiny had a meeting in store for him. Like it has for you now.

That day Rolando Pelizza went to the monastery for a consignment. Born in Chiari, near Brescia, in 1938, the same year that Ettore disappeared, he had from an early age shown an innate aptitude for numbers, an untiring determination and an enormous capacity for practical solutions.

Ettore was a “theoretical” physicist but his brilliance would have remained unknown to all but himself, had he not met Rolando, his “double” in the field of experimentation, one who was able to put into practice the incredible theoretical hypotheses of his “master”.

By means of periodic meetings and letters, delivered in great secret by the monks and people they trusted, Ettore taught Rolando the basics of his mathematics and physics, and he directed him to construct a machine that would allow humanity to take a gigantic step forward.

Rolando dedicated his whole life to this project, gradually and with great resoluteness, going through the phases indicated by Ettore, and achieving them all.

In 1976 the first phase was completed: annihilation of matter. Imagine being able to make all the mountains of refuse in the world disappear in an instant. With this machine it is possible.

A few years later the second phase was ready to be put into action: production of an unlimited quantity of energy at a cost of next to nothing. The machine, in fact, is activated by a small 40 watt motor and does not require thousands of billions of electronvolts as in the LHC, Geneva CERN particle accelerator.

In 1992 the third phase was up and running: transmutation of matter, the dream of all the alchemists.

In 2006 the fourth was ready: passage to other dimensions. A phase that opens the field to absolutely incredible applications, such as travelling to any moment in the past, rejuvenation of the physical body, teletransportation , ...

Many were the difficulties that Rolando had to face to keep faith with his commitment because, among other things, from 1976 onwards the secret services of the whole world – first and foremost the Americans – came to know about the machine, and each, in its own way, dreamt of the possible uses it could be put to – far from Ettore and Rolando’s wish of using it for the good of humanity.

For them the machine was, above all, an unequalled instrument of power: on the one hand as a weapon and on the other as an unlimited source of metals and precious materials.

It seems that confronted with the evident risk of extinction of the human race, the governments should finally decide to disregard their own lust for power and do the one essential thing necessary at the moment: guarantee survival of the human being on Earth.

In 1979 Ettore had already predicted that the Planet would enter a phase of abnormal and excessive warming, which would start between 2022 and 2024. At that moment, in only a few years time, survival of the human race would be in grave danger. Today climate experts have reached the same conclusions but for a later date. They talk about the worst being from 2030 to 2040, in other words, we are deluding ourselves that we still have all the time in the world.

But that is not the case.

Earth is about to become a place where only some animals can survive, such as cockroaches endowed with an exoskeleton which protects them from ultraviolet radiation.

Traditional science can do nothing! The only ones who can possibly save us from this situation are Ettore’s physics and mathematics, Rolando and the machine.

It is paramount that resolution of the problem be given absolute priority.

We believe our task is to spread this news.

Mysteries, like sleight of hand, lose their fascination when they are revealed.

You will notice that this case does not confirm the rule.

Third Millennium Physics

Ettore is the father of a new mathematics and a new physics, far beyond those of today. Hundreds of years will probably have to pass before we are able to understand that which we have defined *Third Millennium Physics*, a physics “yet to come from beyond”, but which has already demonstrated in practice its capacity to penetrate the secrets of Matter as has never before been possible in a “scientific” manner.

Rolando once told us that “learning Ettore’s physics was simpler than learning multiplication tables” but at the same time – we add – it is completely out of reach if one does not understand the logic behind it.

One of the fundamental points of this logic is described in the “General Theory of Exponents”.

In it Ettore emphasises that what we consider “reality” consists of eleven dimensions. Even if we only usually perceive four of them – three spatial and one temporal – it does not mean that the others do not exist. Ignoring the seven hidden dimensions means not understanding how the four that are visible to us operate since they are profoundly conditioned by the invisible ones. In other words, the true “organisation and decision-making centre” of life in Matter, is to be found in a place which has very little to do with the ‘physical’, and which remains hidden from our purely rational sight and from the eyes of traditional science.

In fact it does not even consider the other seven dimensions – it does not even know them. That means it will always have only a partial view of reality and that its capacity to intervene will be extremely limited.

Actually, from this limited and limiting perspective, a substantial operating difference arises.

“Today we are spending vast amounts of money on particle accelerators and nuclear fusion research. All are attempts to rape the atom in an effort to extract the great energy enclosed within it in an extremely violent manner.

Ettore’s physics, on the other hand, follows another path – that of comprehension and non-violence”.

Instead of using methods which reflect the natural flow of things, modern science is violating the atom, just as modern medicine at times violates the human body. Take the words used to describe current treatments for cancer; they are generally explained in war-like terminology ‘fight cancer’, ‘battle with cancer’, ‘bombard tumour cells’.

It is clear though, that to respect the laws of nature, one must first know them.

Ettore attained a “magnificent and at the same time infinitely simple knowledge”, in other words, that everything in nature is “double”, every single thing present in these four dimensions is based on its corresponding partner found in the other seven dimensions.

“The true secret of nature is the existence of antiparticles”, Rolando told us and then he added: “As long as science does not take this into account, it is impossible for it to make any real progress”.

Nature is simple: she has some very precise rules, but not too many as our probability approach would have us believe.

She has extremely strong attraction mechanisms which develop starting with same type of matter – matter in its widest sense – which make things approach each other if they feel they belong to the

same group. It is a kind of ‘Love’, a natural impulse to approach and bond with that for which we feel an affinity.

Therefore, that which holds Creation together, is *a loving thought of the Creator*.

Three fundamental things are expressed with this affirmation: the central role of thought – also human thought – in the process of Creation, ‘Love’ as the power that unites, and the existence of a Creator.

The “General Theory of Exponents” is, in fact, the first scientific theory which presupposes the existence of God.

Ettore understood that the way things move is basically very simple. He succeeded in becoming ‘intimate’ with Matter, and, in that intimacy, she revealed all her simplicity and willingness to be gently guided.

From this a non-violent physics was created; a physics which “makes peace” between Science and Spirituality, succeeding in bridging the enormous gap that modern man has opened between the two main ways of perceiving reality.

*With Ettore, we can return to linking
reasoning with intuition,
Matter with Beyond Matter,
science with the Spirit and
humanity with God!*

The authors

A desire to research the profound meaning of existence and an insatiable curiosity about everything that lies beyond normal human awareness caused them to meet and, since 2006, they have embarked upon a course of joint research of “true knowledge”.

Roberta Rio is an Austrian historian and dancer of Italian origin. She is a member of the German Federation of Historians. She carries out comparative and interdisciplinary studies, combining theoretical research and practical application, which have culminated in an experiential knowledge, full of discoveries and revaluations. She has developed Sacred Dance®, a method through which the body becomes a symbol in movement able to connect with the invisible structure of Creation.

She holds seminars and conferences in various universities (Vienna, Klagenfurt, Linz, Innsbruck, Glasgow, Athens, Oldenburg, Milan, Bologna etc.) and European institutes. She is the author of numerous articles and books in Italian, German, English and also one in Greek.

Francesco Alessandrini is a design engineer of large structures and a university lecturer. For more than twenty years he has dedicated himself to the study of subtle energies and phenomena correlating to states of extended consciousness. For around ten years he has used an intuitive procedure which has allowed him to acquire a host of knowledge on the most varied aspects of Creation and the life of mankind. This knowledge has been transcribed in a dozen books, four of which have also been published in English.

Together Roberta and Francesco have elaborated a new method of historical investigation, called “*historical-intuitive method*”, presented at the University of Glasgow in 2011, in which the use of objective traditional historical method is combined with intuition gained in a state of superconsciousness. With this an interpretation of artefacts and events is accomplished, which is out of reach using classical historical methods.

The “*Path of the Body®*” is another of their joint works: a path of human growth, and evolutionary in that, starting with the physical body and its use in the reality of Matter, one gradually achieves the perception of a *Beyond* which extends into the world of the Spirit. They make this path known in their books, conferences and seminars in Europe.

They have two joint websites, one more general in which they collect their experiences and communicate the dates of experiential courses: www.voyageindestiny.org

The other is exclusively dedicated to the *Third Millennium Physics*: www.thirdmillenniumphysics.world

Their book “*The Machine. The bridge between science and the Beyond*” is available in Italian and English.
